

***LET US HELP YOU BREED YOUR DREAM FOAL***

REPRODUCTIVE SERVICES  
2024

**At Waikato Equine Veterinary Centre, we have a team of highly experienced reproductive veterinarians that are focused on providing you with the best care and advice on breeding your mare.**

Our team regularly service local Thoroughbred, Standardbred and Sport horse studs, in addition to more boutique farms in and around Hamilton, Cambridge, Te Awamutu, Matamata, Morrinsville and Te Kauwhata and Taupo areas.

**Never bred a horse before, not a problem!**

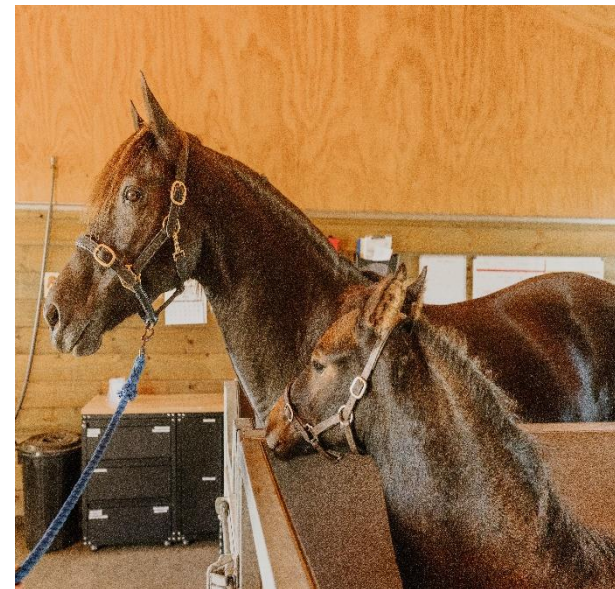

Our vets are here to provide **sound advice** and guidance on where and how to start the process of breeding your dream foal.

- We suggest in the first instance of a maiden or dry mare, that an initial reproductive scan is performed, and an **individual tailored plan** formulated that best suits you and your mare before you make a firm stallion selection choice.

Breeding can be an expensive exercise, so we aim to produce a **successful outcome** utilizing our expert knowledge, while offering you the client access to pre-paid scanning broodmare contracts to assist in your budgeting. Our broodmare scanning contracts are open to all mares and there are no exclusions on problematic breeders or older mares.

**We offer:**

- Pre and post foaling care and advice for the mare and foal.
- Access to our intensive care neonatal foal unit and round the clock intensive care nursing and veterinary staff for compromised foals.
- Artificial insemination of frozen, chilled or fresh semen.
- Standard reproductive scanning and breeding related procedures either on farm\* or at our Pickering Road clinic.
- Full reproductive workups for problematic breeding mares with suitable corrective procedures including advanced surgical techniques.
- Hysteroscopy procedure.
- Embryo Flush and search.
- Preparation of embryo for freezing and dispatch to storage.
- Embryo transfer into a recipient mare.
- The option to agist your mare (and foal) onsite during the breeding process at our purpose-built facility. We are well equipped to accommodate safely in our crush for scanning at optimal times of the day or night- this is highly recommended when using frozen semen.

We encourage you to discuss your mares' breeding requirements in 2023/2024 season with one of our experienced reproductive team and to make your initial appointment please phone 078275570.

### **Meet The Reproduction Team:**

Dr Noel Power MVB

Dr Alexandra Leander BVSc, MPhil

Dr Alec Jorgensen BVSc, Cert EP, Dipl ABVP Eq
